

SYMPHOLIGHT 5.5 SR 2 – Release Notes

Release

NOTICE

The support for the SYMPL Core S has been discontinued. This version is not available for the SYMPL Core S.

General

- FEATURE: Add support for TLS (i.e. HTTPS) connections to the ActionPad and the WebUI, both on Windows and the SYMPL Core SP/Fusion devices.
- FEATURE: Added DALI line recovery after the bus was temporarily disconnected: When using SYMPL Fusion DALI modules, the state of the ballasts is automatically restored when the DALI bus connection was restored again (opt-in feature).
- FEATURE: When using SYMPL Fusion DALI modules, the current in mA is displayed (and can be calibrated, required for recovery to work).
- FIX: In some cases, loading a project failed when another project with specific content was loaded before.
- FIX: Improved communication to SymphoCity 2.0, especially in corner cases like loading a project while a SymphoCity-maintained project was running.

Setup

- FIX: When importing patches (slpatch files), the imported universes were not displayed in the Layout view.

Workflow Designer

- FIX: UDP messages sent from workflow blocks did not reach their target in some configurations, especially on SYMPL Core Sp/Fusion devices.

Any feedback is highly appreciated via email:
